$\rightarrow$

$A_p(\tau) = \sum_t r_p(t) r_p(t + \tau)$

$A_q(\tau) = \sum_t r_q(t) r_q(t + \tau)$

$A_{p,q}(\tau) = A_p(\tau) - A_q(\tau)$

$r(t) \in \{0, 1\}$

A graph showing two overlapping bell-shaped curves on a coordinate system with a horizontal axis labeled τ . The blue curve, representing $A_p(\tau)$, is taller and narrower than the orange curve, representing $A_q(\tau)$. Both curves are centered at $\tau = 0$ and have a peak at the origin.

A graph showing a single purple bell-shaped curve on a coordinate system with a horizontal axis labeled τ . The curve is centered at $\tau = 0$ and has a peak at the origin. A vertical line segment at the peak is labeled Δ , indicating the difference between the two original autocorrelation functions.
